

Guidelines for Quarantine After COVID-19 Exposure

ATTENTION!

This flow chart is for people who have had close contact with someone who tested positive for COVID-19.

Close Contact is:

- Someone who was within [6 feet of an infected person](#) for a total of 15 minutes or more over a 24-hour period (for example, *three individual 5-minute exposures for a total of 15 minutes*)
- Point of contact occurred as early as two days before positive individual had symptoms (OR 2 days before asymptomatic patients test positive) or after symptoms/positive test

Close Contact is NOT: Indirect exposure (e.g. being in contact with a friend who has a relative that tested positive, or a coworker who has a spouse that tested positive, or a child who has a caregiver that tested positive).

Vaccines Up-To-Date*

- 1) **You may attend in-person classes.** If you have symptoms, stay home and get tested.
- 2) Wear a mask indoors for 10 days or until you receive a negative viral (PCR or antigen) test performed 5 days after exposure.
- 3) **If you test positive, you should isolate for at least 5 days** from the date of symptoms (or positive test if asymptomatic) AND 24 hours with no fever without the use of fever-reducing medications. Continue to wear a mask for the next 5 days.

Unvaccinated or Vaccines NOT up-to-date

- 1) Do not attend in-person classes.
- 2) **Stay home for 5 days** after your last contact with a person who has COVID-19.
- 3) Test on day 5. If negative, you can return to campus but continue to wear a mask around others for 5 days.
- 4) **If you test positive, you should isolate for at least 5 days** from the date of symptoms (or positive test if asymptomatic) AND 24 hours with no fever without the use of fever-reducing medications. Continue to wear a mask for the next 5 days.

*Or have you tested positive for COVID-19 with a [viral test](#) within the previous 90 days **and** subsequently recovered **and** remain without COVID-19 symptoms
